Just 1 in 5 Georgia Republicans Think Biden Carried GA 'Fair and Square'

Maybe Trump's Newly Announced Runoff-Eve Rally in GA Will Light Fire Under Perdue and Loeffler's Backers, But At The Moment, Christmas Eve, Democrats Ossoff and Warnock Benefit From GOP Messaging Mess; Of Republicans Sitting Out Senate Finale, 42% Say Voting Process is 'Rigged':

Georgia is a hot mess and no opinion pollster could possibly say what will happen when votes are counted in 2 weeks, 01/05/2021. Any outcome is possible, including victories for the 2 Republican incumbent US Senators. But: the polling data at this hour does not support that, and heading into Christmas week, Democratic challengers Jon Ossoff and Raphael Warnock appear to be benefiting --- at least momentarily --- from a GOP cacophony, according to fresh SurveyUSA research conducted exclusively for WXIA-TV in Atlanta.

First, the backdrop: Of those who are **not** voting in the US Senate runoffs, a disproportionate number are conservative. Of those who identify as "very conservative," 55% say they are not voting in the runoff elections because "the voting process is rigged." This compares to zero percent of liberals and very liberals. Another 7% of "very conservative" voters say they are "intentionally boycotting" the runoffs. This compares to zero percent of liberals and very liberals. So those are the headwinds that incumbent Republicans David Perdue and Kelly Loeffler face.

In the end, because of or in spite of a newly announced Runoff Eve 01/04/2021 campaign rally by President Donald J. Trump, conservatives may get off their rump and walk the walk. But at this hour, both Democrats have tailwinds:

- * Ossoff (D), 51%.
- * Perdue (R), 46%.
- * Compared to an identical SurveyUSA poll 3 weeks ago, Ossoff is up 1, Perdue is down 2.
- * Ossoff had led by 2, now leads by 5.

- * Warnock (D), 52%.
- * Loeffler (R), 45.
- * Compared to an identical SurveyUSA poll 3 weeks ago, Warnock is flat, Loeffler is flat.
- * Warnock had led by 7, still leads by 7.

Worse, for the Republicans, in part because of a pandemic and in part because their mixed messaging tells them not to trust the United States Postal Service, among those voters who have already returned a runoff ballot (all interviews for this poll were conducted after early runoff voting had begun), Ossoff leads Perdue by 27 points, Warnock leads Loeffler by 25 points. Both Republicans must come from behind just to catch up.

Loeffler continues to maintain that Trump may have won the November 2020 presidential election. Among those Georgians who agree with her, but who are not sitting out the runoff, Loeffler leads Warnock, 15:1.

Not surprisingly, Democrat Ossoff leads overwhelmingly among GA's black voters. But Ossoff may also have shaved a point or two off of Perdue's lead among white voters. 3 weeks ago, Perdue led by 43 points among white voters. But today, Ossoff closes to within 36. Ossoff will not win white voters, nor must he to defeat Perdue. But every white voter who drifts Democrat is another ice cube in Chuck Schumer's Scarlet O'Hara cocktail.

Loeffler's red-hot rhetoric has succeeded in alienating both independents and moderates. 3 weeks ago, Warnock led Loeffler by 3 points among GA independents; today Warnock leads by 18. 3 weeks ago, Warnock led Loeffler by 29 points among GA moderates; today, he leads her by 51 points. For that to be true, and for the contest to be unchanged poll-on-poll, Loeffler must be attracting additional "very conservative" supporters and doing better among them. Both are true. 3 weeks ago, "very conservative" voters were 17% of the runoff electorate, and Loeffler led by 64 points. Today, "very conservative" voters are 21% of the electorate and Loeffler leads by 76 points.

About : SurveyUSA interviewed 800 voting-age adults representative of the state of Georgia 12/16/2020 through 12/20/2020. Of the adults, 691 are registered to vote. Of the registered voters, SurveyUSA identified 600 likely to return a ballot on or before the 01/05/2021 deadline. This research was conducted online among a cross-section of adults using sample drawn by Lucid Holdings LLC of New Orleans. The pool of adult survey respondents was weighted to US Census targets for gender, age, race, education, home-ownership, and political party identification. SurveyUSA urges consumers of this research to reflect on how unfamiliar the footing is for anyone attempting to measure what is happening in Georgia as Bulldogs hang Christmas lights during a pandemic and the Republican President is at war with the Republican Governor and the state's Republican Secretary of State. It is possible that Democrats capture both Senate seats, and Chuck Schumer dances a jig, but it is also possible Democrats flip neither or just 1 of the seats, in which case Biden inherits a divided, not united legislative branch. Just 18% of Perdue and Loeffler voters have "full confidence" their runoff vote will be counted accurately compared to 67% of Ossoff and Warnock voters. How this astonishing 4:1 disparity in the very underpinning of Democracy will affect turnout in a pandemic is unknowable.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
