New Jersey Safely Blue, 18 Days Till Votes Are Counted; Incumbent Democrat Menendez Cruises to Easy Re-Election in U.S. Senate Contest: In an election for President of the United States today, 10/19/12, New Jersey's 14 electoral votes remain safely blue, with Barack Obama ahead of Mitt Romney 54% to 40%, according to a SurveyUSA poll conducted for WABC-TV in New York City. Obama's entire margin of victory comes from women, where he leads by 27 points. The contest is tied among men. Obama leads among young and old, the educated and the less educated. Romney has a narrow 48% to 45% advantage among New Jersey's white voters, but that is offset by Obama's strong showing among the state's African Americans, Asian Americans and Hispanics. Romney ties Obama among upper income voters, but Obama leads decisively among middle-income and lower-income voters. Independents break for Romney. Moderates break for Obama. Obama has a Plus 12 Net Favorability in the state. Romney has a Minus 12 Net Favorability in the state. In an election for U.S. Senator from New Jersey, incumbent Democrat Robert Menendez today defeats Republican challenger Joe Kyrillos 53% to 33%. Menendez is a to rabove 50% in every age group and at every income level. Kyrillos challenges Menendez in South Jersey, but Menendez leads 5:3 in Central Jersey and 2:1 in North Jersey. Menendez has a Plus 16 Net Favorability - but, 18 days until votes are counted, 55% of New Jersey likely voters either have no opinion at all of Kyrillos or are neutral on him. Cell-phone and home-phone respondents included in this research. SurveyUSA to be likely to vote in the 11/06/12 election. This research was conducted using blended sample, mixed mode. Respondents reachable on a home telephone (74% of likely voters) were interviewed on their home telephone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (26% of likely voters) were shown a questionnaire on their smartphone, tablet or other electronic device.

Statement of Methodology: About the Poll: This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent US Census estimates for age, gender, ethnic origin and region, to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by SurveyUSA of Clifton, NJ. This statement conforms to the principles of disclosure of the National Council on Public Polls.
