**Americans Broadly in Favor of Limiting What Corporations Can Spend to Influence U.S. Elections:** By 5:1, Americans say corporations should be limited in how much money they can spend to influence the outcome of an election, according to a new SurveyUSA poll conducted for People for the American Way. Americans are divided on whether corporations should have the same rights as individuals, or fewer rights than individuals to influence elections.

But Americans across party line and ideology say that foreign corporations should not be able to spend any money to influence an election; say corporations who have received financial rescue money from the government should not be able to spend money to influence an election; say publicly traded corporations should get shareholder approval before spending money to influence the outcome of an election.

4 in 10 Americans do not have an opinion on an amendment to the US Constitution, but of Americans with an opinion, twice as many favor a hypothetical amendment that would limit what corporations can spend as oppose such an amendment.

1,200 USA adults were interviewed by SurveyUSA 02/05/10 through 02/09/10.

**1** [Answer Choices Rotated] <br>In the past, have corporations had ... too much influence on American elections? Too little influence? Or just the right amount of influence?

**Statement of Methodology:** About the Poll: This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent US Census estimates for age, gender, ethnic origin and region, to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by SurveyUSA of Clifton, NJ. This statement conforms to the principles of disclosure of the National Council on Public Polls.
