Progressives and Moderates Back Different Horses, But Whose Voters Will Turn Out?

2 Weeks Until Votes Are Counted, Incumbent Markey and Challenger Kennedy Neck-And-Neck in MA Democratic Primary Battle for US Senate:

SurveyUSA interviewed 558 likely voters in Massachusetts' upcoming Democratic Primary for US Senate 08/12/20 through 08/16/20 exclusively for Priorities For Progress. Today, 08/17/20, with mail-in voting underway, 5 days before in-person early voting begins, and 15 days until votes are counted, incumbent Ed Markey has a nominal 2-point lead on challenger Joe Kennedy, well within the survey's theoretical credibility interval of +/- 4.2 percentage points.

Markey, first elected to the Senate in a 2013 special election and now seeking his 2nd full term, leads by 5 points among men; among women, the race is tied.

Kennedy, a grandson of Robert F. Kennedy, representing Massachusetts' 4th Congressional District since 2013, leads Markey by 14 points among voters aged 18 to 49; voters 50% back Markey by 10.

Kennedy has a slight lead, 45% to 41%, among registered Democrats; Markey leads by 13 among unenrolled voters who say they are certain to vote in the Democratic primary.

Kennedy leads by 8 points among those voters with a high school education and by 21 among those who have attended some college; Markey leads by 15 among voters with college degrees.

Lower-income voters prefer Kennedy; those with higher incomes back Markey.

Kennedy leads in urban parts of Massachusetts by 11 points, and by 7 in rural areas; Markey leads by 12 in the suburbs.

Markey, endorsed by multiple progressive groups, runs strongly among those who identify as progressives and among those who share affinity with other progressive candidates:

- * Among likely primary voters who identify as "very progressive," Markey leads by 22 points.
- * Among those identifying as "progressive," Markey leads by 17.
- * Kennedy leads by 9 among moderates, and by 12 among the small number of conservative Democratic primary voters.
- * 44% of likely Democratic primary voters are moderate in SurveyUSA's analysis of this contest; 44% are progressive.

Among voters who say they prefer a candidate who is uncompromising in their progressive stances (18% of the electorate), Markey leads by 15 points. Among those who prefer a candidate who will work to find common ground to make progress, the race is tied.

Kennedy and Markey tie among those who say they more identify with the Democratic Party of Barack Obama and Joe Biden (72% of likely voters); Markey leads by 17 points among the 17% of voters who more identify with the Democratic Party of Alexandria Ocasio-Cortez and "The Squad."

Kennedy leads by 3 among the 69% of voters who more identify with the Democratic Party of Obama and Biden; Markey leads by 15 points among the 22% who more identify with the Democratic Party of Bernie Sanders.

About: SurveyUSA interviewed 1,022 state of Massachusetts adults 08/12/20 through 08/16/20. Of the adults, 925 are registered to vote in the state of Massachusetts. Of the registered, 741 voters are either Democrats or voters, un-enrolled in any party, who say they will request a Democratic ballot this cycle. Of the 741 eligible voters, SurveyUSA determined that 558 are likely to return a ballot before the 09/01/20 deadline. This research was conducted using blended sample, mixed mode. Respondents reachable on a landline telephone (49% of likely Democratic primary voters) were interviewed on their home telephone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (51% of likely Democratic primary voters) were shown questions on the display of their smartphone, laptop, desktop or other electronic device.

1 Are you registered to vote in the state of Massachusetts?

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPPI). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
