Release Date: 10/15/2012
Percentaages

3 Weeks Till Votes Are Counted, 'Yes' on Minnesota Marriage Amendment Now in Jeopardy; Obama Steady Atop Romney; Klobuchar Re-Elected: In an election for President of the United States today, 10/15/12, Barack Obama carries Minnesota's 10 electoral votes, defeating Mitt Romney 50% to 40%, according to a SurveyUSA poll conducted for KSTP-TV in the Twin Cities. Obama's 10-point advantage today is identical to his 50% to 40% advantage in a SurveyUSA poll released 5 weeks ago, 09/10/12. In an election for United States Senator from Minnesota today, incumbent DFL candidate Amy Klobuchar defeats Republican challenger Kurt Bills 58% to 30%. Compared to a SurveyUSA poll 5 weeks ago, Klobuchar is up 3 points, Bills is down 4 points. Klobuchar had led by 21 points, now leads by 28 points. Support for an amendment to Minnesota's constitution to define marriage as a union of one man and one woman has eroded. The ballot measure is now running effectively even, 47% for "Yes," 46% for "No," and for the first time in SurveyUSA polling, in danger of defeat. 5 weeks ago, Yes led No by 7 points. In earlier SurveyUSA polling, where a summary of the ballot language was used instead of the actual ballot language, Yes had led by as many as 15 points. * 5 weeks ago, women supported the measure by 5 points, now oppose the measure by 6 points, a swing of 11 points to "No."
* 5 weeks ago, Independent voters supported the measure by 1 point, now oppose the measure by 10 points, a swing of 11 points to "No."
* 5 weeks ago, moderates opposed the measure by 9 points, now oppose the measure by 20 points, a swing of 11 points to "No."
* 5 weeks ago, middle-income voters had supported the measure by 10 points, now oppose the measure by 4 points, a swing of 14 points to "No."

Support for a ballot measure that would require Minnesota voters to present a photo I.D. in order to vote is also eroding. 5 weeks ago, the measure led by 31 points, today leads by 13 points, 53% to 40%. Support for the measure has decreased among women from 29 points to 9 points. Opposition to the measure has increased among Democrats from 14 points to 33 points. Voters with a 4-year college degree had supported the measure by 24 points, now support by just 2 points. In Southern MN, support has eroded from 42 points to 6 points. **Cell-phone and home-phone respondents included in this research:** SurveyUSA interviewed 700 adults 10/12/12 through 10/14/12. Of them, 640 were registered to vote in the state of Minnesota. Of the registered, SurveyUSA determined that 550 were likely to vote in the 11/06/12 election. This research was conducted using blended sample, mixed mode. Respondents reachable on a home telephone (77% of likely voters) were interviewed on their home telephone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (23% of likely voters) were shown a questionnaire on their smartphone, tablet, laptop or other electronic device.

1 If the election for President were today, would you vote for ... (choices rotated) Republican Mitt Romney? Democrat Barack Obama? Or one of the other candidates?

Statement of Methodology: About the Poll: This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent US Census estimates for age, gender, ethnic origin and region, to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by SurveyUSA of Clifton, NJ. This statement conforms to the principles of disclosure of the National Council on Public Polls.
