Women Given Obama The Edge in Maine: In an election for President of the United States in Maine today, 09/24/08, Democrat Barack Obama defeats Republican John McCain 49% to 44%, according to this SurveyUSA poll conducted exclusively for WCSH-TV Portland and WLBZ-TV Bangor. Obama's lead comes entirely from women. The candidates are effectively tied among men. McCain runs strong among gun owners, Pro-Life voters, those who say the United States is still a Super Power, and those who attend religious services regularly. Obama runs strong among college graduates, among lower-income voters, among Pro-Choice voters, and among voters who almost never attend religious services. Obama carries by 5 points both Southern Maine -- which corresponds to Maine's 1st congressional district -- and Northern Maine -- which corresponds to Maine's 2nd congressional district. This means that in an election today, Obama would pick-up all 4 of the state's Electoral College votes. Absentee ballots became available in Maine during the course of the field period for this poll. 7% of Maine voters say they have already voted. Obama leads both among those who have already voted, and among those who have not yet voted.

Filtering: SurveyUSA interviewed 900 Maine adults 09/22/08 through 09/23/08. Of the adults, 820 were registered to vote. Of the registered voters, 675 were determined by SurveyUSA to be likely voters in the 11/04/08 general election. Maine has 4 Electoral College votes. Maine's 4 electoral votes are allocated proportionally; the winner of each congressional district receives 1 electoral vote, and the statewide winner receives the other 2 votes. Maine has has this system since 1972, but it has never been used; no candidate has ever won the state of Maine without carrying both congressional districts. John Kerry carried Maine by 9 points in 2004; Al Gore carried Maine by 5 points in 2000.

1 If the election for President were today, would you vote for ... (choices rotated) Republican John McCain? Democrat Barack Obama? Or one of the other candidates?

** Too few respondents of this type were interviewed for this data to be meaningful.

Statement of Methodology: About the Poll: This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent US Census estimates for age, gender, ethnic origin and region, to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by SurveyUSA of Clifton, NJ. This statement conforms to the principles of disclosure of the National Council on Public Polls.
