Release Date: 04/04/2016
Percentages

In CA, 47% of Registered Voters and 15% of Likely GOP Primary Voters Have 'Extremely Negative' View of Trump; Still He Leads Cruz Narrowly; Clinton Atop Sanders in Democrat Primary; Harris & Sanchez Likely To Advance for Boxer's Seat; CA's Vital 55 Electoral Votes Stay Blue in 2016:

Extremely unscripted Donald Trump is viewed extremely unfavorably by half of California's registered voters and by 15% of Republicans most likely to vote in the state's 06/07/16 GOP Primary, according to research just completed by SurveyUSA for television stations KABC in Los Angeles, KPIX in San Francisco, KGTV in San Diego, and KFSN in Fresno. 71% of CA women and 75% of CA Latinos view Trump negatively today. But even with this anchor tied to his foot, Trump at this hour continues to lead Ted Cruz, though narrowly, among likely Republican primary voters.

Today, it's Trump 40%, Cruz 32%, John Kasich 17%. Trump still leads among women, though his comments about women, and his staff's treatment of women, were in the news during the field period for this survey. Among moderates, Kasich and Trump run effectively even in the GOP Primary, 35% for Trump to 34% for Kasich, with Cruz at 10%. Among those who say they are "somewhat conservative," Cruz leads Trump 44% to 38%. But among those who are "very conservative," Trump leads Cruz 45% to 38%. Among primary voters with an "extremely positive" view of Trump, Trump defeats Cruz 8:1. Among those who are "neutral" on Trump, Cruz leads Trump 4:3. And among those who have an "extremely negative" view of Trump, Cruz defeats Trump 10:1. The contest is fluid; much could change between now and 06/07/16. To win all 172 of California's delegates to the Republican National Convention, Trump, Cruz, or Kasich would need to carry every one of CA's 53 Congressional Districts.

In the Democratic presidential primary today, it's Hillary Clinton 53%, Bernie Sanders 39%. Clinton wins the white vote by 6 points, 48% to 42%, and wins the African American vote 3:1. Sanders edges Clinton among single Democratic primary voters; Clinton leads decisively among married voters.

In the open, non-partisan, "Top 2" primary for United States Senator, to fill the seat that will become open when Democrat Barbara Boxer retires at year-end, Democrat Kamala Harris, the Attorney General of the State of California, and Democrat Loretta Sanchez, a Congresswoman from California's 46th Congressional District, top 3 other challengers and are likely to advance to the 11/08/16 general election. Republican Phil Wyman and Republican Tom Del Beccaro today tie for 3rd place at 8%, and Republican Duf Sundheim trails at 5%. Among voters who tell SurveyUSA they "always" vote in "every" California primary, and who therefore are the most reliable voters, Harris leads Sanchez today by 11 points, 30% to 19%. A smaller turnout might increase the size of Harris' primary margin and a larger turnout might narrow the gap between the Top 2 primary finishers, but in any turnout scenario, at this hour, 2 Democrats advance to the general, and Boxer's seat stays Blue.

In hypothetical November head-to-head presidential match-ups today:

- * Hillary Clinton defeats Donald Trump by 34 points, 60% to 26%.
- * Hillary Clinton defeats Ted Cruz by 25 points, 57% to 32%.
- * Hillary Clinton defeats John Kasich 23 points, 56% to 33%.

- * Bernie Sanders defeats Donald Trump by 39 points, 63% to 24%.
- * Bernie Sanders defeats Ted Cruz by 35 points, 61% to 26%.
- * Bernie Sanders defeats John Kasich by 29 points, 57% to 28%.

Registered voters from all parties were asked, regardless for whom they may vote, which candidate for President would they want sitting in the Oval Office if there were a major terrorist attack on the United States today: 37% say Clinton, 21% say Sanders, 15% say Trump, 9% say Cruz, 5% say Kasich.

About: SurveyUSA interviewed 2,400 state of California adults 03/30/16 through 04/03/16. Of the adults, 1,991 were registered to vote in the state of California. Of the CA registered voters, 356 were determined by SurveyUSA to be likely to vote in the 06/07/16 Republican Presidential primary, 767 were determined by SurveyUSA to be likely to vote in the 06/07/16 Democratic Presidential primary, 1,269 were determined to be likely to vote in the 06/07/16 open, non-partisan U.S. Senate primary, and 1,507 were determined to be likely to vote in the 11/08/16 general election. This research was conducted using blended sample, mixed mode. Respondents reachable on a home telephone (58% of registered voters) were interviewed on their home telephone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (42% of registered voters) were shown a questionnaire on their smartphone, tablet or other electronic device. Barack Obama carried CA by 24 points in 2008 and by 23 points in 2012.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone, in some cases, 100% online, and in other cases a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call landline phones, sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from SSI, from Aristotle, or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. If sample of adults is drawn from SSI, responses are minimally weighted to U.S. Census targets for gender, age and race. If sample of voters is drawn from Aristotle, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. SurveyUSA assigns to each question within the instrument a theoretical margin of sampling error, but such error is useful only in theory. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
