

Results of SurveyUSA Election Poll #14329

Geography: Oklahoma  
Data Collected: 09/05/2008 - 09/07/2008  
Release Date: 09/08/2008  
Percentaes

**Red State Oklahoma Stays Red; Sooners Back Back McCain 2:1 Over Obama:** In an Oklahoma election for President of the United States today, 8 weeks from Election Day, Republican John McCain defeats Democrat Barack Obama 65% to 32%, according to this SurveyUSA poll conducted exclusively for KFOR-TV in Oklahoma City. McCain takes two-thirds of voters age 35 to 49, 71% of voters age 50 to 64, and 73% of voters 65+. 40% of Democrats vote Republican.

**Filtering:** SurveyUSA interviewed 900 Oklahoma adults 09/05/08 through 09/07/08. All interviews were completed after the Labor Day weekend, and after the conclusion of the Republican National Convention. Of the adults, 784 were registered to vote. Of the registered voters, 652 were determined by SurveyUSA to be likely voters in the 11/04/08 general election. Oklahoma has 7 Electoral College votes. George W. Bush carried Oklahoma by 31 points in 2004 and by 22 points in 2000.

**1** If the election for President were today, would you vote for ... (choices rotated) Republican John McCain? Or, Democrat Barack Obama?

\*\* Too few respondents of this type were interviewed for this data to be meaningful.

**Statement of Methodology:** About the Poll: This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent US Census estimates for age, gender, ethnic origin and region, to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by SurveyUSA of Clifton, NJ. This statement conforms to the principles of disclosure of the National Council on Public Polls.
