

Results of SurveyUSA Election Poll #14398

Geography: Kansas
Data Collected: 09/21/2008 - 09/22/2008
Release Date: 09/23/2008
Percentaages

Kansas: McCain in Driver's Seat, But May Want To Watch His Mirrors: In an election for President of the United States in Kansas today, 09/23/08, six weeks from Election Day, Republican John McCain defeats Democrat Barack Obama 53% to 41%, according to this SurveyUSA pre-election poll conducted exclusively for KWCH-TV Wichita and KCTV-TV Kansas City. Compared to an identical poll released one month ago, McCain is down 5 points; Obama is up 6 points. Then, McCain led by 23 points; today, that lead has been cut in half, to 12 points. McCain continues to lead among young and old, male and female, college educated and less educated, frequent worshipers and not-so-frequent worshipers, but his margins have shrunk, and in many cases, have been sliced almost exactly in half: Among men, McCain had led by 33, now leads by 17. Among women, McCain had led by 15, now leads by 7. Among voters age 18 to 49, McCain had led by 25, now leads by 12; among voters 50+, McCain had led by 22, now leads by 12. Among college graduates, McCain had led by 17, now leads by 4. Among those who have not graduated college, McCain had led by 31, now leads by 20. 13% of Democrats cross over to vote Republican, down from 22% one month ago; 14% of Republicans cross over to vote Democratic, essentially unchanged from one month ago. Independents today favor McCain by 7 points, essentially unchanged from last month.

Filtering: SurveyUSA interviewed 900 Kansas adults 09/21/08 through 09/22/08. Of them, 799 were registered to vote. Of the registered voters, 666 were determined by SurveyUSA to be likely voters in the 11/04/08 general election. Kansas has 6 Electoral College votes. George W. Bush carried Kansas by 25 points in 2004 and by 21 points in 2000.

** Too few respondents of this type were interviewed for this data to be meaningful.

Statement of Methodology: About the Poll: This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent US Census estimates for age, gender, ethnic origin and region, to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by SurveyUSA of Clifton, NJ. This statement conforms to the principles of disclosure of the National Council on Public Polls.
