Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profils, governments, agencies and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone, in some cases, 100% online, and in other cases a blend of the two. For those projects multi-mode"): Respondents who have a home (landine) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call and means, for other projects, that SurveyUSA indicates the percentage of nespondents who and use a home telephone are interviewed on an electronic device, which means, for some projects, that SurveyUSA indicates the percentage of respondent's who use a home phone and the percentage who do not use a home telephone is purchased from SSI, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight reproduces are rolated to prevent order bias, recency and latency effects. On some studies, critain polulations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents, who have a levels of any server ordicate in their views are conduced and a release contains the date(s) on which interviews are conduct
