6% Nationwide Claim to Know Someone Who Has COVID-19

Americans Calculate They Have a 23% Chance of Getting the Coronavirus Based on What is Known At This Hour; 18% Are Extremely Worried; 9% Say Their World Has Been Turned Upside Down; Majority Concerned That If Sick, Hospital Will Not Have Bed; 2/3rds Say Worst Still Ahead:

President Donald Trump, Fox News, and talk radio have succeeded in convincing conservatives and Republicans that COVID-19 "will pass" and is no more virulent than the flu, according to SurveyUSA's latest nationwide survey conducted 03/12/20, during a time of volatile markets and international alarm. 4 times as many "very conservative" Americans say they are "not at all" worried about the Coronavirus as those who identify as "very liberal."

Among all Americans coast to coast, young and old, employed and unemployed, at this hour:

- * 9% say their world has been turned upside down by the virus, disproportionately those with children.
- * 21% say their everyday life has changed noticeably, which grows to 55% among workers who have been told to work from home.
- * 41% say their lives have been slightly impacted.
- * 29% say their lives have not been impacted at all, including those still shaking hands, hugging and kissing, and those in rural areas.

Asked on a scale of 0% to 100% how likely they are to catch the Coronavirus, Americans in the aggregate put the odds at 23%, which ranges from a high of 49% among those who say they personally know someone who already has the virus to a low of 8% among those who, in a self-fulfilling prophecy, say they are not at all worried about the virus. For the most part, disparate demographic sub-populations handicap their changes essentially the same. There is no meaningful difference between the odds that whites, blacks, Latinx/Hispanic Americans, and Asian Americans assign themselves. There is no meaningful difference between how men and women size-up the situation. There is an oddball bubble among age groups, with adults age 35 to 49 ---- those most likely to have kids in the house ---- saying they are 27% likely to get the virus, compared to 21% of those whose age 50 to 64, many of whose kids are grown or have have moved out.

A majority of Americans are concerned (including 20% "extremely" concerned) that if they do get sick, there will be no hospital bed for them. 34% are not very concerned about hospitals being overrun; the final 10% are singularly unconcerned, including disproportionately those ignoring advice from the US Centers for Disease Control to stop shaking hands, stop hugging, stop kissing, and to begin "social distancing." "Very conservative" adults are 6 times more likely than "very liberal" adults to say there is no looming medical resource crisis.

64% of Americans say the worst of the virus's fallout is still ahead. 11% say the worst is already behind us, including 17% of those in excellent health, compared to 5% of those in poor health.

About : SurveyUSA interviewed 850 adults nationwide 03/12/20. The research was conducted online, after President Trump's Wednesday 03/11/20 oval-office address to the nation but before Friday's 03/13/20 live news conference. Interviews completed at a time of extraordinary confusion and mixed messages in response to fluid events. Other exclusive, contemporaneous SurveyUSA opinion poll findings on COVID-19, the Coronavirus, are available [here](#), [here](#), and [here](#). ** Too few respondents of this type were interviewed for this data to be meaningful.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
