California Prop 29 Could Go Either Way; Feinstein Opponent Unknowable Heading Into Final Weekend Before Primary: With ¼ of primary ballots already cast and 5 days remaining until the deadline for voting, California Proposition 29, The Tobacco Tax for Cancer Research Act, may pass narrowly or may not pass, according to a SurveyUSA poll conducted for KABC-TV in Los Angeles, KPIX-TV in San Francisco, KGTV-TV in San Diego and KFSN-TV in Fresno. Prop 29 is today supported by 42% of primary voters, opposed by 38%. That leaves 20% of primary voters still undecided, and how those final votes are cast will determine the outcome. Among voters who tell SurveyUSA they have already returned a ballot, Prop 29 leads 52% to 45%. But among those who have not yet voted but promise to do so by the 06/05/12 deadline - the "late deciders" -- Prop 29 is effectively even, 38% in favor, 36% opposed. Young and old voters narrowly support 29. Middle aged voters narrowly oppose. Hispanics and Asians support. Whites and blacks narrowly oppose. Democrats support. Republicans oppose. In the top-2 primary for U.S. Senate, Dianne Feinstein is assured to advance to a general election, but it remains anyone guess who her opponent will be. 8 Feinstein opponents show up as a blip on the radar screen. 15 other opponents are not even a blip. Among the blips: Elizabeth Emken and Dan Hughes each have 4%, Rick Williams and Al Ramirez each have 3%. In a hypothetical November matchup between Feinstein and Emken, Feinstein wins.

In a hypothetical November matchup between Feinstein and Hughes, Feinstein wins. In a general election for President of the United States today, 5 months till election day, Barack Obama carries California by 21 points, defeating Mitt Romney 57% to 36%. Cell-phone and home-phone respondents included in this research: SurveyUSA interviewed 1,890 CA adults 05/27/12 through 05/29/12. Of the adults, 1,575 were registered to vote. Of the registered voters, 1,232 were determined by SurveyUSA to be likely to cast a ballot in the 06/05/12 Primary. This research was conducted using blended sample, mixed-mode. Respondents reachable on a home telephone (24% of registered voters) were interviewed on their home phone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone were shown a questionnaire on their smartphone, tablet, laptop or other electronic device. On Proposition 29, there is a dramatic difference in how home-phone and cell-phone respondents vote. Among respondents reachable on a home telephone, Prop 29 is defeated by 5 points, 37% Yes to 42% No. But among respondents not reachable on a home telephone, Prop 29 passes by 36 points, 60% Yes, 26% No, a 41-point difference depending on how the interview was conducted, one of the largest "mode" effects ever observed by SurveyUSA on any election contest or ballot measure.

In the California primary for United States Senate, there are 24 candidates running. Which candidate will you vote for? [candidate names rotated; presented here in ranked order of finish for ease of comprehension]

Statement of Methodology: About the Poll: This poll was conducted by telephone in the voice of a professional announcer. Respondent households were selected at random, using Random Digit Dialed (RDD) sample provided by Survey Sampling, of Fairfield CT. All respondents heard the questions asked identically. The pollster's report includes the geography that was surveyed; the date(s) interviews were conducted, the number of respondents who answered each question and the theoretical margin of sampling error for each question. Where necessary, respondents were weighted using the most recent US Census estimates for age, gender, ethnic origin and region, to align the sample to the population. In theory, one can say with 95% certainty that the results would not vary by more than the stated margin of sampling error, in one direction or the other, had the entire universe of respondents with home telephones been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than sampling error. These include: the difficulty of interviewing respondents who do not have a home telephone; the refusal by some with home telephones to be interviewed; the order in which questions are asked; the wording of questions; the way and extent to which data are weighted; and the manner in which specialized populations, such as likely voters, are determined. It is difficult to quantify the errors that may result from these and other factors. Research methodology, questionnaire design and fieldwork for this survey were completed by SurveyUSA of Clifton, NJ. This statement conforms to the principles of disclosure of the National Council on Public Polls.
