In Texas, Trump Sees Clinton High-Beams in His Rear-View Mirror: A Blip on the Radar? Or Early Evidence of a GOP Collapse?

26 days till votes are counted in Texas, Donald Trump leads Hillary Clinton by 4 points, 47% to 43%, with Libertarian Gary Johnson at 3% and Green Party Candidate Jill Stein at 1%, according to an exclusive Texas Tenga poll conducted by SurveyUSA.

No Republican has carried Texas by fewer than 13 points since Bob Dole defeated Bill Clinton by 5 points 20 years ago, when Texan Ross Perot siphoned 7% of the vote. Today, Trump leads by 33 points among white Texans, but Clinton leads by 64 points among African Americans and by 23 points among Latinos. (The survey was conducted bilingually, in the respondent's choice of English or Spanish. 27% of the likely voter electorate is Latino in SurveyUSA's data set.)

Though there is not an obvious gender gap --- Trump leads narrowly among both men and women --- different women respond differently to Trump: Among rural Texas women, Trump leads by 41 points. Among suburban Texas women, Clinton leads by 1 point. Trump leads by 35 points among Evangelical voters, leads by 10 points in military households and leads by 10 points among high-school educated voters. Clinton has a narrow advantage among lower-income and middle-income Texans, but Trump leads by 13 points among affluent voters.

Trump holds 88% of the Republican base, but trails Clinton by a nominal 2 percentage points among independents. Clinton holds 94% of the Democratic base, and leads Trump by 8 points among self-identified moderates. Trump leads among voters age 50+, Clinton leads among voters under age 50. The older and whiter the electorate, the better Trump will perform.

Of Trump supporters, 61% say they are voting "for Trump," compared to 39% who are voting "against Clinton." Of Clinton supporters, 68% say they are voting "for Clinton," compared to 30% who are voting "against Trump."

Trump leads by 8 points in North Texas, which includes the cities of Dallas and Fort Worth, and Dallas, Tarrant and 41 surrounding counties. Trump leads by 6 points in East Texas, which includes the city of Houston, Harris and 59 surrounding counties. Trump leads by 15 points in West Texas, which includes the city of El Paso, El Paso County and 87 surrounding counties. Clinton leads in Central Texas, which includes the cities of Austin and San Antonio, and Travis, Bexar and 26 other counties. And Clinton leads by 9 points in South Texas, which includes the cities of Laredo and Brownsville, and Webb, Cameron and 33 other counties.

Context and methodology: SurveyUSA interviewed 800 adults from the state of Texas 10/10/16 through 10/12/16. During these 3 days, Trump was the center of a firestorm of criticism, including his un-endorsement by a number of leading national Republicans. It is unclear if, during the 4 days before early voting begins and the 26 days until all votes are counted, whether Trump will continue to sink, stabilize or rebound. The electorate is volatile. It is possible Trump will carry Texas by more traditional margins than this data set shows. It is also possible that the state's score will be settled in the single digits. Of the 800 adults interviewed, 734 were registered to vote. Of the registered voters, 638 were determined by SurveyUSA to be likely to vote on or before the 11/08/16 deadline. This research was conducted using blended sample, mixed mode. Respondents reachable on their home telephone (67% of likely voters) were interviewed on their home phones in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (33% of likely voters) were shown a questionnaire on the display of their smartphone, tablet or other electronic device. Mitt Romney carried Texas by 16 points in 2012. John McCain carried Texas by 13 points in 2008. Texan George W. Bush carried Texas by 23 points in 2004 when Bush was elected to his 2nd term. Bush carried Texas by 22 points in 2000 when he was elected to his first term.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone, in some cases, 100% online, and in other cases a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call landline phones, sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from SSI, from Aristotle, or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. If sample of adults is drawn from SSI, responses are minimally weighted to U.S. Census targets for gender, age and race. If sample of voters is drawn from Aristotle, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. SurveyUSA assigns to each question within the instrument a theoretical margin of sampling error, but such error is useful only in theory. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
