Could Bright-Red Utah Go 'Blue' For First Time in 52 Years? Clinton Starts-Off Tied With Trump:

In a state that Republican Mitt Romney carried with 72% of the vote in 2012, that John McCain carried with 63% of the vote in 2008, that George W. Bush carried with 73% of the vote in 2004 and 67% of the vote in 2000, that Bob Dole carried with 54% of the vote in 1996, Republican Donald Trump today can only manage to tie Democratic nominee Hillary Clinton, with 35% for each major-party candidate, as the primary season ends and the general election season begins, according to a SurveyUSA poll conducted for the Salt Lake Tribune and the Hinckley Institute of Politics at the University of Utah. Libertarian Gary Johnson gets 13% today, 5 months until votes are counted; 16% of likely voters are undecided; and 1% of likely voters tell SurveyUSA they will stay home and not vote.

At this hour, 65% of all Utah voters have an unfavorable opinion of Trump. That negative yard-marker grows from 43% among very conservative voters, to 56% among somewhat conservative voters, to 74% among moderates, to 90% among somewhat liberal voters, to 93% among very liberal voters. The only thing that Trump has going for him is that Clinton is liked even less. Clinton is viewed unfavorably by 67% of all voters, including 95% of very conservative voters, 86% of somewhat conservative voters, 55% of moderates, 25% of liberals and 20% of very liberal voters. When all Utah voters are asked to rate the quality of candidates for public office in 2016, just 5% say the quality is excellent, 72% say the quality is fair or poor.

In the contest for President, Trump leads in Congressional District #1, trails in Congressional District #3, and runs effectively even with Clinton in Congressional District #2 and #4. Trump leads by 19 points among Mormon voters, Clinton leads by 15 points among Non-Mormon voters, and by 38 points among voters who are not a member of an organized religion. Trump leads by 12 among voters with a high school education. Clinton leads by 9 among voters with a 4-year college degree. Trump leads by 5 among men; Clinton leads by 5 among women.

A [separate analysis](#) has been prepared for the Mia Love vs Doug Owens general election in Utah's 4th Congressional District.

About: SurveyUSA interviewed a total of 1,725 registered voters from the state of Utah, which included an oversample of 300 voters from Utah's 4th Congressional District, using registration based sample (RBS, also known as: voter list sample) purchased from Aristotle in Washington DC. Once the 4th Congressional District was weighted to its correct proportion of the state, a representative universe of 1,425 registered voters was analyzed. Of them, 1,238 were determined to be likely to vote in the 11/08/16 general election for President, Governor and United States Senator. This research was conducted using blended sample, mixed mode. Respondents reachable on their home telephone (82% of likely November voters) were interviewed on their home telephones in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (aka: the cell-phone respondents; 18% of likely November voters), were shown a questionnaire on their smartphone, tablet or other electronic device. Caution: interviews for this survey were conducted during a week when Hillary Clinton and the Democratic Party were in the news in a positive light, celebrating Clinton's clinching of the party's nomination for President, and at a time when Donald Trump and the Republican Party were in the news in a mostly negative light, having to do with Trump's comments about a federal judge. The Trump-Clinton contest can be expected to evolve during the 5 months between now and when votes are counted.

Context: The last Democrat to carry Utah was Lyndon Baines Johnson, who in 1964 carried 44 states including Utah's then 4 Electoral Votes. Republican Richard Nixon carried Utah with 56% of the vote in 1968 and 68% of the vote in 1972; Republican Gerald Ford carried Utah with 62% of the vote in 1976; Republican Ronald Reagan carried Utah with 73% of the vote in 1980 and with 75% of the vote in 1984; George Herbert Walker Bush carried Utah with 66% of the vote in 1988 and 43% of the vote in 1992.

1 If the November general election for President of the United States were today, and these three names were on the ballot who would you vote for? (names rotated) Republican Donald Trump? Democrat Hillary Clinton? Or Libertarian Gary Johnson?

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone, in some cases, 100% online, and in other cases a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call landline phones, sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from SSI, from Aristotle, or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. If sample of adults is drawn from SSI, responses are minimally weighted to U.S. Census targets for gender, age and race. If sample of voters is drawn from Aristotle, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. SurveyUSA assigns to each question within the instrument a theoretical margin of sampling error, but such error is useful only in theory. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
