New Mexico Whites Split, But Clinton Carries the State With Overwhelming Support from Latino Voters;
Democrat Toulouse Oliver Well Positioned To Defeat Republican Espinoza in Secretary of State Contest:

Former New Mexico Governor Gary Johnson captures 14% of the vote for President of the United States in an election in New Mexico today, 10/03/16, 19 days till early voting begins, but that is not enough to derail Democrat Hillary Clinton, who defeats Donald Trump at this hour 46% to 33%, with Green Party candidate Jill Stein finishing 4th behind Johnson at 2%, according to a SurveyUSA poll conducted for KOB-TV, the Hubbard Broadcasting station in Albuquerque.

Trump carries white voters by a nominal 2 percentage points, 42% to 40%, but Clinton buries Trump among New Mexico's Latino voters, 52% to 21%. Clinton holds 83% of the Democratic base, compared to just 76% of Republican who stand with Trump. Johnson siphons 24% of the Independent vote, where Clinton manages 35% to Trump's 29%. Clinton leads among college-educated whites by 22 points. She leads among suburban women by 21 points. She leads among the most affluent voters by 15 points.

Half of Trump supporters say they are voting "for" Trump, half say they are voting "against" Clinton. By contrast, 66% of Clinton supporters are voting "for" Clinton; just 33% are voting "against" Trump. Of those who are voting for Johnson, 21% say they are voting "against" Trump, 5% are voting "against" Clinton, and 70% are voting "for" Johnson. Voters who say the economy is the most important issue facing the country back Clinton 49% to 31%. Voters focused on terrorism or immigration back Trump. Voters focused on education or the environment back Clinton.

In the contest to fill the open seat for New Mexico Secretary of State, Democrat Maggie Toulouse Oliver is well positioned to defeat Republican Nora Espinoza, 54% to 34%. Toulouse Oliver, the Bernalillo County Clerk, is backed by 57% of Latinos, 59% of seniors and 60% of college-educated voters. She gets 90% of the vote among "very liberal" voters. Espinoza gets 68% of the vote among "very conservative" voters, but trails Toulouse Oliver in every region of the state and among voters of all ages.

Context and Filtering: SurveyUSA interviewed 800 state of NM adults 09/28/16 through 10/02/16. Of the adults, 682 were registered to vote. Of the registered, 594 were determined by SurveyUSA to be likely to vote on or before 11/08/16 in the Presidential election; 524 were likely to vote in the Secretary of State contest. 5% of registered voters say they almost always vote in Presidential elections but will not vote in 2016 because they do not like any of the candidates. An offsetting 7% of voters tell SurveyUSA they almost never vote in Presidential election, but will vote in 2016 because they are uniquely drawn to one of the candidates. This research was conducted using blended sample, mixed mode. Respondents reachable on a home telephone (69% of likely voters) were interviewed on their home telephones in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (31% of likely voters) were shown a questionnaire on the display of their smartphone, tablet or other electronic device. Democrat Barack Obama defeated Republican Mitt Romney by 10 points in 2012 and defeated Republican John McCain by 15 points in 2008. In 2004 and 2000, Democrats John Kerry and Al Gore carried New Mexico by less than 1 percentage point. New Mexico's last elected Secretary of State, Republican Dianna Duran, resigned after pleading guilty to felony embezzlement and money laundering. The seat is open. Gary Johnson was elected Governor of New Mexico in 1994 and 1998. He ran as a Republican.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone, in some cases, 100% online, and in other cases a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call landline phones, sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from SSI, from Aristotle, or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. If sample of adults is drawn from SSI, responses are minimally weighted to U.S. Census targets for gender, age and race. If sample of voters is drawn from Aristotle, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. SurveyUSA assigns to each question within the instrument a theoretical margin of sampling error, but such error is useful only in theory. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
