Majority of WA State Voters Trust Election Systems, Workers, Believe Biden Won 2020 Election Fair and Square, But ...

1 in 5 WA Republicans Have No Trust in Vote-By-Mail, Local Election Officials; 1 in 3 Republicans Believe Donald Trump Truly Won 2020 Race:

Exclusive SurveyUSA research conducted for The Seattle Times, KING 5 TV, the University of Washington's Center for an Informed Public, and Washington State University's Murrow College of Communication shows registered voters across the state of Washington generally having trust in their election systems and workers, and believing President Joe Biden was legitimately elected President with little or no fraud – but not everyone agrees.

Overall, 71% of Washington voters say they have high (43%) or moderate (28%) trust in Washington's vote-by-mail system; 28% have little (16%) or no (12%) trust. Those identifying as very conservative are 3 times more likely than others to say they have no trust in the system; Latino voters are twice as likely as others to have no trust in voting by mail. 21% of Republicans say they have no trust, compared to just 3% of Democrats. Among those who voted for Donald Trump in 2020, 17% have a high level of trust in Washington's vote-by-mail system, 30% have moderate trust, 29% have little trust, and 24% have no trust; among Biden voters, 65% have high trust, 25% moderate trust, 7% little trust, and just 2% have none.

Overall, 61% say their level of trust in vote-by-mail in Washington state has stayed the same following the 2020 presidential election; 23% say their level of trust has decreased; 12% say it has increased. While majorities of Republicans, Democrats, and independents all say their level of trust has stayed the same, the percentages vary significantly, with 71% of Democrats having that view, compared to 58% of independents and 52% of Republicans. At 40%, Republicans are 5 times more likely than Democrats to say their level of trust has decreased.

When asked about trust in the officials who oversee elections where they live, results are similar to voters' feelings about vote-by-mail, with 64% having high (31%) or moderate (33%) trust, and 31% having little (19%) or no (12%) trust. 86% of Democrats have trust in their local officials, compared to to 55% of independents and 47% of Republicans. 50% of Republicans do not trust their local officials, as do 40% of independents and only 10% of Democrats.

SurveyUSA asked voters whether liberals or conservatives share more misinformation about elections, using a 7-point scale where a response at the far left side of the scale, labeled "liberals," was scored as a 1.0, a response at the far right end of the scale, labeled "conservatives," was scored a 7.0, and a response in the center, labeled "both equally." The average respondent answer, 4.4, signifies a slight lean towards conservatives sharing more misinformation. Each side, unsurprisingly, blames the other: conservatives give an average answer of 3.1, or phrased another way, 0.9 points to the left of center; liberals give an average answer of 5.5, or 1.5 points right of center. Independents' average answer is 4.4, just shy of half a point right of center.

57% of registered voters statewide say there was very little or no fraud in the 2020 presidential election; Joe Biden truly won. 19% believe there was some fraud; Joe Biden may or may not have truly won. 15% say there was major fraud, meaning Donald Trump truly won the election. SurveyUSA then asked that 15% who believes Donald Trump won the election which related claims they believe. Percentage saying they agree with each claim, ranked from highest to lowest: 70%: Thousands of dead people voted in swing states. 68%: Fraudulent ballots supporting Joe Biden were added to the totals. 63%: Voting machines hacked or reprogrammed to flip votes from Trump to Biden. 53%: Ballots supporting Trump were destroyed by elections officials. 51%: States changed election rules in ways that benefitted Biden. **About the Poll / Filtering:** SurveyUSA interviewed 825 Washington State adults online 07/06/22 through 07/10/22, using sample provided by Lucid Holdings LLC of New Orleans. Of the adults, 731 were identified as being registered to vote and were asked the questions which follow. The pool of adult survey respondents was weighted to US Census targets for gender, age, race, education, and home ownership.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
