DATESTAMP: 25 MARCH 2020; DATA GATHERED AT TIME WHEN VIRUS CASES ARE DOUBLING EVERY 3 DAYS

President of the United States of America lights the fuse on a ticking time bomb: Boomers are Expendable.

Trump Asks an Idled Nation: Why Is Your Life More Valuable Than My Economy? By 5:1, Americans Say 'Flattening the Curve' More Important Than Putting People Back to Work; Is Coronavirus Cure Worse Than Problem? By 2:1, USA Says 'No.' 1 in 3 Say It Is Best Just to Ignore Trump:

Americans vigorously disagree with President Donald J Trump's latest 2 assertions, a) that the cure for the Coronavirus might be worse than the disease itself, and b) that "opening up" the country should happen in the next couple of weeks, according to SurveyUSA's latest time-series tracking poll on COVID-19, the global pandemic.

Immediately after President Trump announced that he would like to see America's churches packed shoulder-to-shoulder with parishioners on Easter Sunday, 18 days from now, SurveyUSA interviewed 1,000 Americans nationwide on multiple aspects of the government's virus response. This is the first set of findings of several that will be released from this data-set.

64% of American adults say they are familiar with the expression, "Flatten the Curve," which has been for weeks the consistent drumbeat from local, state, and federal health officials, designed to keep America's symptomatic patients from all showing up in the hospital Emergency Room at the same time. Of those familiar:

- * 79% say it is more important to flatten the curve compared to the 16% who say it is more important to put Americans back to work.
- * 73% say it is more important to flatten the curve compared to the 23% who say their personal freedom is more important.
- * 65% say it is more important to flatten the curve compared to the 29% who say it is more important to help the US economy.
- * 60% say it is more important to flatten the curve compared to the 35% who say it is more important to pay the rent.

By 2:1, Americans disagree with the President's repeated assertion that he does not want a cure for Coronavirus to be worse than the disease. 57% nationwide say the government effort to prevent the spread of the virus is saving lives, compared to 27% who say that the government response is creating more problems than it is solving.

- * By 5:4, Americans say President Trump is more concerned about the stock market than he is about keeping Americans safe.
- * By 5:4, Americans say President Trump is more concerned about getting re-elected than he is about keeping Americans safe.
- * In fairness, the percentage of Americans who say Trump is concerned with keeping people safe has [grown](#) slowly from 34% to 37% to today 40%.

Americans are divided over whether the government's response to the virus is too focused on big corporations or too focused on the average working person. Just 8% say the government is too focused on the average working person, compared to 39% who say the government is too focused on big corporations. But another 39% say the government response has struck the right balance between workers and corporate bigs.

When evaluating how they should react to competing narratives about the virus, 49% of Americans say it is better to listen to President Trump. 35% of Americans say it is better to ignore President Trump.

About : SurveyUSA interviewed 1,000 USA adults nationwide 03/24/20 through 03/25/20. The research was conducted online. Though 100% of the interviews were conducted after President Trump announced that he wanted to see America's churches full on Easter Sunday, it is unknowable what percentage of respondents may have heard that specific language before responding to this opinion survey. SurveyUSA has released a dozen separate opinion research data-sets on the Coronavirus to date. As new data is gathered and released, results are immediately posted to [@SurveyUSA's](#) twitter feed, [here](#).

Results of SurveyUSA News Poll #25256

Geography: USA 50 States

Data Collected: 03/24/2020 - 03/25/2020

Release Date: 03/25/2020

Percentages

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
