About the Research / Filtering: SurveyUSA interviewed 550 adults from Nebraska's 2nd Congressional District 08/23/24 through 08/26/24. Of the adults, 507 were identified as being registered to vote and were asked the questions which follow. This research was conducted using blended sample, mixed mode. 54% of registered voters were shown the survey questions on the display of their smartphone, laptop or tablet, using nonprobability sample of online adult panelists chosen randomly by Cint/Lucid Holdings LLC of New Orleans. The other 46% of registered voters were interviewed by telephone, using probability-based telephone sample of registered voters purchased from Aristotle in Washington DC. 29% of registered voters were texted on their cell phones by live operators who secured the cooperation of each respondent before linking them to an online survey; 16% of registered voters were interviewed on their home telephone in the recorded voice of a professional announcer. The combined pool of survey respondents was weighted to 2022 US Census ACS targets for gender, age, race, education, and home ownership, as well as by recalled 2020 vote. Responses of statewide voters, including those from the 2nd district who in that report are weighted down to their proportional level of respondents, can be seen in [this separately prepared, separately weighted report](#).

See Split Ticket's analysis of this data [here](#).

1 Are you registered to vote in the state of Nebraska?

As you may be aware, there are several ballot initiatives that may be up for a vote this cycle in Nebraska. Please indicate how you would vote on each of the following ballot measures.

A measure to partially repeal Legislative Bill 1402. As a reminder, Legislative Bill 1402 authorized an education scholarship program with a \$10 million budget. How would you vote on this measure?

17 A measure to establish a paid sick leave program. Depending on the size of their employer, eligible employees would earn up to 56 hours of paid sick time per year to use for personal or family health needs. The measure would set the conditions for earning and using sick time, would prohibit retaliation against employees for using sick time, require employers notify their employees about the sick leave program, and create rules for enforcement and the right for employees to sue employers who violate the law. How would you vote on this measure?

18 A measure that would constitutionally protect the right to an abortion until fetal viability. A right to abortion until fetal viability is defined as "the point in pregnancy when, in the professional judgment of the patient's treating health care practitioner, there is a significant likelihood of the fetus' sustained survival outside of the uterus without the application of extraordinary medical measures." How would you vote on this measure?

17 A measure to establish a paid sick leave program. Depending on the size of their employer, eligible employees would earn up to 56 hours of paid sick time per year to use for personal or family health needs. The measure would set the conditions for earning and using sick time, would prohibit retaliation against employees for using sick time, require employers notify their employees about the sick leave program, and create rules for enforcement and the right for employees to sue employers who violate the law. How would you vote on this measure?

18	A measure that would constitutionally protect the right to an abortion until fetal viability. A right to abortion until fetal viability is defined as "the point in pregnancy when, in the professional judgment of the patient's treating health care practitioner, there is a significant likelihood of the fetus' sustained survival outside of the uterus without the application of extraordinary medical measures." How would you vote on this measure?

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
